

Yokesh Kumar Balasubramani

Contact Number: +91 6369902414 | Email: yokeshkumar.balasubramani@protonmail.com

PROFESSIONAL STATEMENT

As an experienced Security Vulnerability Analyst, I am responsible for validating and assessing the severity of both public and privately disclosed security vulnerabilities. My role involves driving security issues to resolution through continuous engagement with engineering teams, ensuring that security gaps are identified and addressed promptly. I collaborate closely with product engineering teams to improve hardening opportunities and reduce preventable vulnerabilities.

TECHNICAL PROFICIENCIES

Areas of Expertise include:

Skills & Expertise:

- Vulnerability Assessment | Security Risk Analysis | Security Process Re-engineering | Incident Management | Stakeholder Collaboration | Root Cause Analysis | Security Metrics Reporting | Threat Intelligence | Security Gap Analysis | Risk Mitigation | Threat Modeling | Security Testing | Penetration Testing | Security Policy Development | Secure SDLC | Security Posture Improvement | Security Awareness Training | Incident Response | Data Protection & Privacy | Compliance Management | Security Audits | Secure Architecture Design | Security Operations

Tools & Technologies:

- Vulnerability Management Tools | SIEM Tools | Jira | Confluence | MS Project | Visio | PowerPoint | Excel | Word | SharePoint | Nessus | Metasploit | Burp Suite | Wireshark | Snort | OpenVAS

Process & Methodology:

- Agile | Waterfall | Incident Response Frameworks | Unified Modeling Language (UML) | Security Information and Event Management (SIEM) | Risk Assessment Frameworks | Penetration Testing Methodologies | Secure Coding Practices | Business Continuity Planning | Compliance Frameworks (e.g., NIST, ISO, GDPR) | Security Architecture Modeling | Threat Modeling | Vulnerability Scanning | Security Operations Center (SOC) Procedures

PROFESSIONAL EXPERIENCE

Security Engineer | Zoho Corporation Pvt. Ltd, India

June 2023 – Present

ManageEngine, a division of Zoho Corporation, focuses on enterprise IT management and security. It is renowned for its innovative and comprehensive solutions that help businesses streamline operations and enhance security.

- Coordinated with penetration testing vendors to assess application security and ensure timely remediation of vulnerabilities.
- Analyzed security assessment reports and implemented necessary fixes to enhance application security.
- Ensured compliance by addressing security gaps identified in regulatory audits and compliance reports.
- Identified, reported, and tracked security bugs to resolution, strengthening overall application security.
- Managed the bug bounty program, triaging reported vulnerabilities and collaborating with developers for remediation.
- Developed and automated tools for efficient vulnerability management and continuous security monitoring.
- Led incident management efforts by investigating security incidents, mitigating risks, and implementing preventive measures.
- Managed vulnerable component identification and remediation, ensuring secure dependency management.
- Reviewed new application designs to identify and mitigate security loopholes before deployment.
- Strong proficiency in application and infrastructure security vulnerabilities (OWASP Top 10) and mitigation strategies.
- Deep understanding of root-cause analysis techniques to identify and resolve vulnerabilities, making data-driven decisions to improve overall security posture.
- Experience with identifying trends in systemic vulnerabilities, implementing continuous improvement measures.
- Familiarity with risk management frameworks and tools used for vulnerability tracking and reporting.

Achievements

Delivered Vulnerability Management & Reporting Tool

- Developed a Vulnerability Management and Reporting tool that streamlined the identification, tracking, and remediation of security vulnerabilities, significantly improving the organization's security posture and operational efficiency.

EDUCATION AND QUALIFICATIONS

- Bachelor of Engineering degree in Electronics and Communication Engineering.

SKILLS

- Conduct dynamic (DAST) and static (SAST) security testing on ServiceNow applications
- Identify, triage, prioritize, and track security vulnerabilities across the platform
- Provide actionable remediation guidance to developers and validate fixes
- Interface with external researchers and triage bug bounty submissions
- Automate vulnerability scanning using security tools and custom scripts
- Integrate security testing tools into CI/CD pipelines for continuous security checks
- Perform threat modeling to identify potential security risks in application design
- Conduct security architecture reviews for new and existing platform components
- Ensure compliance with standards such as NIST, CIS, GDPR, and ISO 27001
- Assist with internal and external security audits and assessments
- Apply cloud security best practices for AWS, Azure, and Google Cloud environments
- Manage and audit identity and access management policies and configurations
- Support incident response teams in analyzing and mitigating security incidents
- Prepare detailed reports on vulnerabilities, remediation status, and risk impact
- Collaborate effectively with developers, product managers, and external stakeholders
- Advocate for security best practices throughout the software development lifecycle
